TEXORA · LECTURE SHEET · COURSE GUIDE

Elective II (4101): The Second Course of Your Specialization Track

Course 4101 has no syllabus of its own in the term list — the syllabus book itself sends you to the Specialization course sections at the end of the book. This guide explains what the slot is, which course fills it for each of the four tracks, and where its lecture sheets live in Texora.

4101 · ELECTIVE II · GUIDE · LEVEL 4 TERM 1

1. The course in brief

In the Level 4 Term 1 course list, **4101** is printed without a departmental prefix — unlike its neighbours TE-4104 or TE-4105 — because it is not one course but a **slot**: the second elective of the degree. The syllabus book prints only the slot's frame and one instruction:

ITEM	AS PRINTED FOR 4101 ELECTIVE II
Class hours	45 total (3 per week)
Credit	3.0
Topic list in the term list	None — the book states: *details can be found in the specialization course content sections at the bottom (end) of the syllabus*

So the content of your 4101 is decided by the **specialization track** you already follow. The track was chosen once, at Elective-I (3207) in Level 3 Term 2, and it does not change here: each track's own 4101 course — printed in the Specialization section at the end of the syllabus book — is what fills this slot. The same track continues through all six electives of the degree: 4101, 4102 and 4103 in this term, and 4201, 4202 and 4203 in Level 4 Term 2.

2. The four tracks and their 4101 courses

TRACK	SPECIALIZATION	THE COURSE THAT FILLS SLOT 4101 (3.0 CREDITS, 45 HOURS)
YM	Yarn Manufacturing Engineering	**YM-4101 · Process Control in Spinning**

FM	Fabric Manufacturing Engineering	**FM-4101 · Advanced Weaving Technology**
WP	Wet Processing Engineering	**WP-4101 · Textile Chemistry & Coloration-III**
AM	Apparel Manufacturing Engineering	**AM-4101 · Advanced Apparel Manufacturing-I**

Yarn Manufacturing (YM-4101). Process Control in Spinning studies how the spinning process is monitored and held to standard: the process parameters at each stage of yarn production, the sources of variation in the yarn, and the control methods used to keep yarn quality consistent.

Fabric Manufacturing (FM-4101). Advanced Weaving Technology studies weaving at an advanced level: modern loom mechanisms and motions, the control of fabric formation on the loom, and the technology behind woven fabrics of higher quality and complexity.

Wet Processing (WP-4101). Textile Chemistry & Coloration-III is the third course of the track's chemistry and coloration sequence. It continues the study of textile chemistry into advanced coloration, building on the dyeing and chemical processing covered in the earlier courses of the sequence.

Apparel Manufacturing (AM-4101). Advanced Apparel Manufacturing-I is the first of the track's two advanced apparel courses. It studies garment production at an advanced level, covering the organisation and technology of apparel manufacture beyond the introductory courses.

> **THE CHOICE WAS MADE ONCE, AT 3207**
>
> Elective II does not reopen the specialization choice. The track you entered at 3207 Elective-I is the track of this slot, of its sessional companion 4102, of Elective III (4103), and of the three electives of Level 4 Term 2 (4201, 4202, 4203). A student therefore reads only their own track's sheets for 4101: the other three courses in the table above belong to other students' specializations, not to yours.

3. How this slot sits in the degree

- **The theory anchor of the term's elective set.** In Level 4 Term 1 the specialization appears as a set of three slots, and 4101 is its theory anchor: a full 45-hour, 3.0-credit theory course around which the other two slots are arranged.
- **Its sessional companion is 4102.** Slot 4102, Elective II Sessional, is the practical companion of this course in the same track, so the experiments of 4102 follow the theory taught here in 4101.
- **Its partner theory course is 4103.** Slot 4103, Elective III, is the term's second theory direction in the same track, so together 4101 and 4103 give the track its two theory lines for this term.
- **One track per student.** Every student fills slot 4101 with exactly one track's course and is examined on that course; there is no combined or partial version.

- **Administration comes from the department.** Any question about track allocation or a change of track is governed by the department's notice for the term, not by the syllabus book, and this guide does not guess those administrative details.

4. Finding your sheets in Texora

1. Open Texora and go to the **Specialization Courses** section of the Syllabus area (it sits below the term cards, because the tracks cut across terms).
2. Open your track's page — **Yarn Manufacturing**, **Fabric Manufacturing**, **Wet Processing** or **Apparel Manufacturing**.
3. On the track page, open the course coded **<track>-4101** — e.g. *YM-4101 Process Control in Spinning*. Its topic sheets are the lecture sheets for your 4101.
4. The other six courses listed on the same track page (3207, 4102, 4103, 4201, 4202, 4203) are your other electives in the same track — the track page is the map of your whole specialization.

This guide sheet is filed under the bare code **4101** in the Level 4 Term 1 list, exactly as the syllabus book prints the slot. It deliberately contains no topic content of its own: the content lives, as the book directs, in the specialization sections — and in Texora, on the four track pages.

Glossary

Elective slot — a position in the term's course list (here, code 4101) whose actual course is set by the student's specialization track rather than fixed for all students. **Specialization track** — one of the four final-year concentration paths (YM, FM, WP, AM); each track is a family of courses sharing one slot code pattern. **Track code** — the two-letter prefix (YM/FM/WP/AM) that replaces the departmental prefix on specialization course codes, e.g. WP-4101. **Sessional** — a laboratory or practical course, examined through practical work, reports and viva rather than a written theory paper alone; slot 4102 is the sessional companion of this slot.

Key points

• 4101 Elective II: 45 class hours, 3.0 credits — a slot, not a single course; the syllabus book prints no topics for it and refers to the Specialization sections.
• Your 4101 is your track's course: YM-4101 Process Control in Spinning · FM-4101 Advanced Weaving Technology · WP-4101 Textile Chemistry & Coloration-III · AM-4101 Advanced Apparel Manufacturing-I.
• The track was chosen once, at 3207, and continues unchanged through 4101, 4102, 4103, 4201, 4202 and 4203 — these slots do not reopen the choice.

• 4101 is the theory anchor of the term's elective set: 4102 is its sessional companion and 4103 is the track's second theory direction.
• In Texora: Syllabus → Specialization Courses → your track page → the <track>-4101 course.

5. Practice (orientation questions)

Short questions to check you have the slot's structure right; brief answers follow.

1. A classmate says "4101 is a new choice — I can pick a different track this term." Correct the statement in two sentences.
2. You specialize in dyeing and finishing. Give your track code, your 4101 course code and its exact title.
3. What is the relationship between slot 4101 and slot 4102 in the same track?
4. Why does Texora file this guide under the code "4101" instead of under one of the track codes?

Answer key

1. The track is not chosen again at 4101: it was chosen once, at Elective-I (3207), and the same track fills every later elective slot. Slot 4101 simply delivers the second course of that track, so a student studies their own track's 4101 course.
2. Wet Processing track — code **WP**; course **WP-4101**, titled **Textile Chemistry & Coloration-III** (3.0 credits, 45 hours).
3. Slot 4102, Elective II Sessional, is the practical companion of 4101 in the same track: its experiments and practical work follow the theory of the track's 4101 course, so the pair is studied together in the same term.
4. Because the slot itself belongs to no track: this guide explains the slot that every Level 4 Term 1 student holds, whichever track fills it. Filing it under the bare printed code mirrors the syllabus book, where 4101 appears in the term list without a prefix, and keeps the guide findable from the Level 4 Term 1 course list.
