TEXORA · LECTURE SHEET · COURSE GUIDE

Elective III (4103): The Third Course of Your Specialization Track

Course 4103 has no syllabus of its own in the term list — the syllabus book itself sends you to the Specialization course sections at the end of the book. This guide explains what the slot is, which course fills it for each of the four tracks, and where its lecture sheets live in Texora.

4103 · ELECTIVE III · GUIDE · LEVEL 4 TERM 1

1. The course in brief

In the Level 4 Term 1 course list, **4103** is printed without a departmental prefix — unlike its neighbours TE-4104 or TE-4105 — because it is not one course but a **slot**: the third elective of the degree. The syllabus book prints only the slot's frame and one instruction:

ITEM	AS PRINTED FOR 4103 ELECTIVE III
Class hours	45 total (3 per week)
Credit	3.0
Topic list in the term list	None — the book states: *details can be found in the specialization course content sections at the bottom (end) of the syllabus*

So the content of your 4103 is decided by the **specialization track** you already follow. The track was chosen once, at Elective-I (3207) in Level 3 Term 2, and it does not change here: each track's own 4103 course — printed in the Specialization section at the end of the syllabus book — is what fills this slot. The same track continues through all six electives of the degree: 4101, 4102 and 4103 in this term, and 4201, 4202 and 4203 in Level 4 Term 2.

One printing detail is recorded here exactly as it stands in the book. In the Specialization section, three of the four 4103 courses are printed at 3.0 credits, matching the term list, but **WP-4103 Color Physics is printed there as 1.5 credits**, although it is a 45-hour theory course like the others. The value is recorded as printed, and this guide does not correct it by guessing.

2. The four tracks and their 4103 courses

TRACK	SPECIALIZATION	THE COURSE THAT FILLS SLOT 4103 (45 HOURS)
YM	Yarn Manufacturing Engineering	**YM-4103 · Special Yarn Manufacturing** (3.0 credits)
FM	Fabric Manufacturing Engineering	**FM-4103 · Special Fabric Production** (3.0 credits)
WP	Wet Processing Engineering	**WP-4103 · Color Physics** (1.5 credits as printed in the Specialization section)
AM	Apparel Manufacturing Engineering	**AM-4103 · Clothing Comfort & Special Apparel Products** (3.0 credits)

Yarn Manufacturing (YM-4103). Special Yarn Manufacturing studies the production of yarns beyond the conventional range: the special yarn structures and effects a spinner can produce, and the manufacturing methods used to make them.

Fabric Manufacturing (FM-4103). Special Fabric Production studies the production of fabrics beyond the standard woven and knitted range: the special fabric structures and products of the track, and the methods used to produce them.

Wet Processing (WP-4103). Color Physics studies colour itself as a physical subject: how colour is produced, perceived and measured, and how that understanding supports colour matching and colour control in dyeing and printing.

Apparel Manufacturing (AM-4103). Clothing Comfort & Special Apparel Products studies two connected subjects: the comfort of clothing as worn — how a garment interacts with the body and its environment — and the special apparel products made for particular needs and uses.

> **THE CHOICE WAS MADE ONCE, AT 3207**
>
> Elective III does not reopen the specialization choice. The track you entered at 3207 Elective-I is the track of this slot, of Elective II (4101) and its sessional companion (4102), and of the three electives of Level 4 Term 2 (4201, 4202, 4203). A student therefore reads only their own track's sheets for 4103: the other three courses in the table above belong to other students' specializations, not to yours.

3. How this slot sits in the degree

- **The track's second theory direction.** Slot 4101 is the term's elective theory anchor, and 4103 gives the same track a second theory direction alongside it, so the track is studied from two directions in

one term rather than through a single course.

- **A theory course, not a sessional.** Unlike 4102, this slot has no laboratory companion of its own: it is a full 45-hour theory course, examined as theory, and it stands beside the 4101–4102 theory-and-sessional pair.
- **One track per student.** Every student fills slot 4103 with exactly one track's course and is examined on that course; there is no combined or partial version.
- **Administration comes from the department.** Any question about track allocation or a change of track is governed by the department's notice for the term, not by the syllabus book, and this guide does not guess those administrative details.

4. Finding your sheets in Texora

1. Open Texora and go to the **Specialization Courses** section of the Syllabus area (it sits below the term cards, because the tracks cut across terms).
2. Open your track's page — **Yarn Manufacturing**, **Fabric Manufacturing**, **Wet Processing** or **Apparel Manufacturing**.
3. On the track page, open the course coded **<track>-4103** — e.g. *YM-4103 Special Yarn Manufacturing*. Its topic sheets are the lecture sheets for your 4103.
4. The other six courses listed on the same track page (3207, 4101, 4102, 4201, 4202, 4203) are your other electives in the same track — the track page is the map of your whole specialization.

This guide sheet is filed under the bare code **4103** in the Level 4 Term 1 list, exactly as the syllabus book prints the slot. It deliberately contains no topic content of its own: the content lives, as the book directs, in the specialization sections — and in Texora, on the four track pages.

Glossary

Elective slot — a position in the term's course list (here, code 4103) whose actual course is set by the student's specialization track rather than fixed for all students. **Specialization track** — one of the four final-year concentration paths (YM, FM, WP, AM); each track is a family of courses sharing one slot code pattern. **Track code** — the two-letter prefix (YM/FM/WP/AM) that replaces the departmental prefix on specialization course codes, e.g. WP-4103. **Sessional** — a laboratory or practical course, examined through practical work, reports and viva rather than a written theory paper alone; slot 4102 is a sessional, while this slot, 4103, is a theory course.

Key points

• 4103 Elective III: 45 class hours, 3.0 credits in the term list — a slot, not a single course; the syllabus book prints no topics for it and refers to the Specialization sections.
• Your 4103 is your track's course: YM-4103 Special Yarn Manufacturing · FM-4103 Special Fabric Production · WP-4103 Color Physics · AM-4103 Clothing Comfort & Special Apparel Products.
• The Specialization section prints WP-4103 Color Physics as 1.5 credits although it is a 45-hour theory course — recorded here exactly as printed.
• The track was chosen once, at 3207, and continues unchanged through 4101, 4102, 4103, 4201, 4202 and 4203 — these slots do not reopen the choice.
• 4103 is the track's second theory direction for the term, beside the 4101 theory anchor and its sessional companion 4102.
• In Texora: Syllabus → Specialization Courses → your track page → the <track>-4103 course.

5. Practice (orientation questions)

Short questions to check you have the slot's structure right; brief answers follow.

1. A classmate says "WP-4103 must be a small course — it is printed at only 1.5 credits." Give the complete and honest answer.
2. You specialize in apparel production. Give your track code, your 4103 course code and its exact title.
3. How do slots 4101, 4102 and 4103 fit together within one track in Level 4 Term 1?
4. Why does Texora file this guide under the code "4103" instead of under one of the track codes?

Answer key

1. WP-4103 Color Physics is a full 45-hour theory course, the Wet Processing course for slot 4103, which the term list prints at 3.0 credits. The Specialization section prints the course itself as 1.5 credits — an unusual value for a 45-hour theory course — and both values are recorded exactly as printed rather than resolved by guessing.
2. Apparel Manufacturing track — code **AM**; course **AM-4103**, titled **Clothing Comfort & Special Apparel Products** (3.0 credits, 45 hours).
3. Within one track, 4101 is the theory anchor, 4102 is its sessional companion whose experiments follow the 4101 theory, and 4103 is the track's second theory direction. Together they form the track's complete three-slot elective set for Level 4 Term 1.
4. Because the slot itself belongs to no track: this guide explains the slot that every Level 4 Term 1 student holds, whichever track fills it. Filing it under the bare printed code mirrors the syllabus book, where 4103 appears in the term list without a prefix, and keeps the guide findable from the Level 4 Term 1 course list.
