TEXORA · LECTURE SHEET · COURSE GUIDE

Elective II Sessional (4102): The Practical Companion to Elective II

Course 4102 has no syllabus of its own in the term list — the syllabus book itself sends you to the Specialization course sections at the end of the book. This guide explains what the slot is, which sessional course fills it for each of the four tracks, and where its experiment sheets live in Texora.

4102 · ELECTIVE II SESSIONAL · GUIDE · LEVEL 4 TERM 1

1. The course in brief

In the Level 4 Term 1 course list, **4102** is printed without a departmental prefix — unlike its neighbours TE-4104 or TE-4105 — because it is not one course but a **slot**: the sessional companion of Elective II. The syllabus book prints only the slot's frame and one instruction:

ITEM	AS PRINTED FOR 4102 ELECTIVE II SESSIONAL
Class hours	45 total (3 per week)
Credit in the Level 4 Term 1 term list	3.0
Credit in the Specialization section	1.5 — each track's 4102 course is printed there as a 1.5-credit sessional
Topic list in the term list	None — the book states: *details can be found in the specialization course content sections at the bottom (end) of the syllabus*

The two printed credit values do not agree, and this guide records both exactly as printed rather than choosing between them. A credit of 3.0 is unusually high for a sessional course: every other sessional in the degree carries 1.5 credits, and the Specialization section itself prints each track's 4102 course as 1.5 credits. The term list's 3.0 therefore stands in the book as printed, side by side with the Specialization section's 1.5, and the discrepancy is noted here honestly without resolving it by guessing.

The content of your 4102 is decided by the **specialization track** you already follow. The track was chosen once, at Elective-I (3207) in Level 3 Term 2, and it does not change here: each track's own 4102 sessional course — printed in the Specialization section at the end of the syllabus book — is what fills

this slot. The same track continues through all six electives of the degree: 4101, 4102 and 4103 in this term, and 4201, 4202 and 4203 in Level 4 Term 2.

2. The four tracks and their 4102 courses

TRACK	SPECIALIZATION	THE COURSE THAT FILLS SLOT 4102 (45 HOURS; 1.5 CREDITS AS PRINTED IN THE SPECIALIZATION SECTION)
YM	Yarn Manufacturing Engineering	**YM-4102 · Process Control in Spinning Sessional**
FM	Fabric Manufacturing Engineering	**FM-4102 · Advanced Weaving Technology-II Sessional**
WP	Wet Processing Engineering	**WP-4102 · Textile Chemistry & Coloration-III Sessional**
AM	Apparel Manufacturing Engineering	**AM-4102 · Advanced Apparel Manufacturing-I Sessional**

Each course in the table is the sessional companion of its track's 4101 theory course: it carries the 4101 course's name with "Sessional" added, and its practical work is built on that theory course. The pairing is exact — a student takes the 4102 sessional of the same track as their 4101 theory course, in the same term.

Yarn Manufacturing (YM-4102). Process Control in Spinning Sessional is the laboratory companion of YM-4101. Its experiments put the spinning process-control theory of 4101 into practice, measuring and controlling the process in the laboratory.

Fabric Manufacturing (FM-4102). Advanced Weaving Technology-II Sessional is the laboratory companion of FM-4101. Its practical work follows the advanced weaving technology of the theory course, working with the loom and with woven fabric in the laboratory.

Wet Processing (WP-4102). Textile Chemistry & Coloration-III Sessional is the laboratory companion of WP-4101. Its experiments carry out the chemistry and coloration work of the theory course at the bench, in the wet-processing laboratory.

Apparel Manufacturing (AM-4102). Advanced Apparel Manufacturing-I Sessional is the practical companion of AM-4101. Its practical work applies the advanced apparel manufacturing theory of 4101 in the apparel laboratory and workshop.

> **THE CHOICE WAS MADE ONCE, AT 3207**

> Elective II Sessional does not reopen the specialization choice. The track you entered at 3207 Elective-I is the track of this slot, of the theory course 4101 it accompanies, of Elective III (4103), and of the three electives of Level 4 Term 2 (4201, 4202, 4203). A student therefore reads only their own track's sheets for 4102: the other three sessional courses in the table above belong to other students' specializations, not to yours.

3. How this slot sits in the degree

- **The sessional companion of 4101.** Slot 4102 exists to give the term's elective theory a practical half: the experiments of 4102 follow the 4101 theory of the same track, so the two slots are taught and studied as a pair.
- **Practical assessment.** As a sessional, the course is assessed through practical work — experiments performed, records and reports maintained, and viva — rather than through a written theory paper alone.
- **One track per student.** Every student fills slot 4102 with exactly one track's sessional course, the sessional of their own track; there is no combined or partial version.
- **Administration comes from the department.** Any question about track allocation or a change of track is governed by the department's notice for the term, not by the syllabus book, and this guide does not guess those administrative details.

4. Finding your sheets in Texora

1. Open Texora and go to the **Specialization Courses** section of the Syllabus area (it sits below the term cards, because the tracks cut across terms).
2. Open your track's page — **Yarn Manufacturing**, **Fabric Manufacturing**, **Wet Processing** or **Apparel Manufacturing**.
3. On the track page, open the course coded **<track>-4102** — e.g. *YM-4102 Process Control in Spinning Sessional*. Its experiment sheets are the practical sheets for your 4102.
4. The other six courses listed on the same track page (3207, 4101, 4103, 4201, 4202, 4203) are your other electives in the same track — the track page is the map of your whole specialization.

This guide sheet is filed under the bare code **4102** in the Level 4 Term 1 list, exactly as the syllabus book prints the slot. It deliberately contains no experiment content of its own: the content lives, as the book directs, in the specialization sections — and in Texora, on the four track pages.

Glossary

Elective slot — a position in the term's course list (here, code 4102) whose actual course is set by the student's specialization track rather than fixed for all students. **Specialization track** — one of the four final-year concentration paths (YM, FM, WP, AM); each track is a family of courses sharing one slot code pattern. **Track code** — the two-letter prefix (YM/FM/WP/AM) that replaces the departmental prefix on specialization course codes, e.g. WP-4102. **Sessional** — a laboratory or practical course, examined through practical work, reports and viva rather than a written theory paper alone; this slot is the sessional companion of the 4101 theory course in the same track.

Key points

• 4102 Elective II Sessional: 45 class hours — a slot, not a single course; the syllabus book prints no topics for it and refers to the Specialization sections.
• Credit as printed differs by place: 3.0 in the Level 4 Term 1 term list, but 1.5 for each track course in the Specialization section, matching every other sessional — recorded here exactly as printed in each place.
• Your 4102 is your track's sessional: YM-4102 Process Control in Spinning Sessional · FM-4102 Advanced Weaving Technology-II Sessional · WP-4102 Textile Chemistry & Coloration-III Sessional · AM-4102 Advanced Apparel Manufacturing-I Sessional.
• Each 4102 course is the sessional companion of the same track's 4101 theory course, and its experiments follow that theory.
• The track was chosen once, at 3207, and continues unchanged through 4101, 4102, 4103, 4201, 4202 and 4203 — these slots do not reopen the choice.
• In Texora: Syllabus → Specialization Courses → your track page → the <track>-4102 course.

5. Practice (orientation questions)

Short questions to check you have the slot's structure right; brief answers follow.

1. A classmate says "4102 is worth 3.0 credits, like a theory course." Give the complete and honest answer, using both places where the credit is printed.
2. You specialize in fabric formation. Give your track code, your 4102 course code and its exact title, and name the theory course it accompanies.
3. Why does every 4102 course title repeat its track's 4101 title with "Sessional" added?
4. Why does Texora file this guide under the code "4102" instead of under one of the track codes?

Answer key

1. The credit is printed differently in the two places: the Level 4 Term 1 term list prints slot 4102 as 3.0 credits, while the Specialization section prints each track's 4102 course as 1.5 credits, the value

carried by every other sessional in the degree. Both values are recorded as printed; the guide does not resolve the discrepancy by guessing.

2. Fabric Manufacturing track — code **FM**; course **FM-4102**, titled **Advanced Weaving Technology-II Sessional**. It accompanies the theory course **FM-4101 Advanced Weaving Technology** in the same track.
3. Because each 4102 course is the sessional companion of its track's 4101 theory course: the shared title marks the pairing, and the added word "Sessional" marks the practical character of the course, whose experiments follow the 4101 theory.
4. Because the slot itself belongs to no track: this guide explains the slot that every Level 4 Term 1 student holds, whichever track fills it. Filing it under the bare printed code mirrors the syllabus book, where 4102 appears in the term list without a prefix, and keeps the guide findable from the Level 4 Term 1 course list.
